

RFP #769-17 Mt. Zion Weather Stations

Addendum 001
Issued August 9, 2017

1. The tower size is listed as both 10M and 30M. Please can you confirm that you need a tower that is 10M or 30ft tall and not 30M tall?
The tower is to be 10meters, 30 feet tall.
2. Do you have any photographs of the tower site?
Please see attached "Map of Mt. Zion Weather Station site", page 2 of this document. Please note, that this bid request is for the weather station and base station equipment only and not for installation of weather station and base station equipment.
3. Has the area been surveyed or staked for construction?
No it has not. Please note that installation will be performed by the purchaser (Colorado Mountain College) as indicated in the RFQ documentation, "Purchaser will install Mt. Zion equipment and on-campus station radio equipment." This request does not include installation.
4. Is it acceptable for the bidder to visit the site on their own time in advance of bid due date?
Yes, provided bidder complies with all US Forest Service land use regulations.
5. Is compound fencing required?
No.
6. Please clarify if the bidder is responsible for procuring and installing all weather station and base station equipment? Or are we installing customer provided equipment?
This bid request is for the weather station and base station equipment only and not for installation of weather station and base station equipment.
7. Who provides the tower, instruments, etc., the General Contractor or Colorado Mountain College?
This bid request is for the "tower, instruments, etc." only.
8. Is there a tower that Colorado Mountain College is thinking about using? It appears to be a specified as a 90' tilt up MET tower.
Question #1 above resolves the "typo" error in the RFQ text. Specifically, the tower must be a "10m tall tower, hardened aluminum, including all necessary mounting equipment (e.g. guy-wires, anchors, hinged base plate, mounting bolts, hardware)"
