

RFQ #853-19Q

Trail Bikes

Addendum 001
Issued May 6, 2019

1. Will an adjustable fork with suspension ranging from 100-120mm be accepted? The Salsa Timberjack has a 130mm fork specified. A 10mm difference in suspension equates to 4/10 of an inch or 0.397 mm difference.

Yes, the alternate would be reviewed.

2. The RFQ specified a Shimano deore drivetrain with a 30 tooth front ring but does not specify gearing on the rear cassette, do you want a 1X10 (10 gears on the back) or 1X11 (11 gears on the back). The 11 gears will offer riders more range but is more expensive.

The campus prefers a 1x11 for the rear.
